Commands

`\grid[<length>]` : This produces a grid of width textwidth. `<length>` is an integer, wich defines the length of the grid in centimeter. If left empty, it will span to the end of the page.

Enviroments

`Aufgabe[<points>][<symbol>]`   Defines a new exercise.

- `<points¿`: Decimal number, declares the points given to each Ex.

- `<symbol¿`: Integer, Chooses from diffrent symbols to put a the margin. If empty it defaults to a little sheet with a pen.

Please note that for now to change the symbol the point bracket must be present
